

# AI Resume Analysis Report

Overall ATS Score: 65/100

## Category Breakdown

| Category             | Score  |
|----------------------|--------|
| Education            | 90/100 |
| Experience           | 60/100 |
| Formatting           | 70/100 |
| Keyword Optimization | 50/100 |
| Skills               | 85/100 |

## Recommendations

**Missing Skills:**

- Docker
- Agile Methodology
- SQL
- Git

**Missing Keywords:**

- RESTful APIs
- CI/CD
- Microservices

**Weak Sections:**

- Experience (lacks measurable impact)
- Summary (missing completely)

**Content Improvements:**

- Add quantifiable metrics to experience bullets (e.g., 'increased efficiency by 20%').
- Add a strong professional summary at the top.

**Formatting Improvements:**

- Use bullet points more consistently.
- Ensure dates align on the right side.

**ATS Optimization:**

- Use standard section headers like 'Work Experience' instead of just 'Experience'.
- Remove any complex tables.

## AI Generated Solutions

**Improved Professional Summary:**

Results-driven Software Engineering student with experience in full-stack Python development and Machine Learning. Proven ability to quickly learn new technologies and deliver impactful solutions, such as developing an AI-powered resume analyzer. Seeking to leverage strong technical foundation in a challenging software engineering role.

**Stronger Achievements:**

- Developed a Flask-based web application, improving team productivity by streamlining internal processes.
- Engineered robust Python scripts that resolved 15+ critical bugs and improved system stability by 20%.

**Skills Presentation Advice:**

Group your technical skills into logical categories: 'Languages' (Python, JS), 'Frameworks' (Flask), and 'Tools' (Git, Docker) to make it highly scannable for recruiters.
